BUY GREE, PLANT A TREE

As Bermuda's #1 Air conditioner Distributor, we at **HVAC Shack Ltd.** understand the importance of preserving the environment, and the consumer concerns about climate change. This year, we have partnered with the **Bermuda Zoological Society [BZS]** on their Micro Forest Project, which is an effort to re-develop Bermuda's original ecosystem and provide innovative solutions to combat climate change. End users of **GREE** air conditioners can have a lasting, positive impact on our environment, community and planet.

What is SEER and how is it different to SEER2?

SEER is the abbreviation for Season Energy Efficiency Ratio. It's a number assigned to the approximate use of energy of the air conditioner. The higher the number, the more efficient the unit. SEER2 is a new way of calculating SEER to more accurately reflect the true conditions of installs and environment in a real world setting.

Can I buy my unit over the counter?

Generally, no. TTW and 'window unit' style air conditioners can be bought directly from the distributors, but Split and Multi Zone systems can only be purchased by someone with a Refrigerant Handler's License issued by the Bermuda Government to reduce the impact of refrigerant on our environment.

What other costs should you expect?

A basic install can cost anywhere between \$800-\$1000 for labor and ancillary materials. However, each install is unique, so it's best to have a site visit from an experienced provider. Most companies offer a free, no obligation estimate.

Is there a warranty?

All Gree units have a 5 year warranty* if it has been regularly maintained over the duration. Most established companies will offer a 1 year warranty on professional services.
